

# Leveraging HK technologies for smart ageing

Dr. Vincent Lau R&D director, Software & Systems, ASTRI

> 香港應用科技研究院有限公司 Hong Kong Applied Science and Technology Research Institute Company Limited

# **About ASTRI**

ASTRI is a government subvention organization, focusing on R&D on information and communication technologies (ICT), with a mission to perform high quality R&D and transfer technologies to the industries.

#### Key R&D areas

ASTRI is the largest R&D centre in Hong Kong with an annual funding around HK\$410M.

Key R&D areas include:

- IC design
- Sensors
- Modules
- Packaging
- Li-ion battery materials
- Embedded software (e.g. MBD)
- Cloud computing
   (e.g. cyber security, big data analytic)
- Wireless network (e.g. 5G, RF antenna design)

and others, covering an extensive range of technological fields

#### **R&D** Capability

Among the current 500-strong staff, 420 (~85%) are R&D talents, 25% of which hold a PhD degree, 50% Master's and 25% Bachelor's.

# **Four Types of Project Funding**

ASTRI's R&D projects are funded mainly by Innovation and Technology Commission (ITC) of HKSAR Government through the Innovation and Technology Fund (ITF)

Cash Rebate Scheme Industry partner is eligible for 30% cash rebate from ITC on sponsoring projects, except for sponsorship in form of licensing

ITF-funded Seed Project	ITF-funded Platform Project	Industry Collaborative Project	Contract Research
<ul> <li>Forward-looking/ exploratory work to provide foundation work for future projects</li> </ul>	Source of fund Industry contribution: ≥ 10% (≥ 1 company)	Source of fund Industry contribution: 30-50%	Source of fund Industry contribution: 100%
Capped at 2.8M HKD	Funded by ITC:	Funded by ITC:	
	≤ 90%	50-70%	
	10%	30% : 70% 50% : 50%	100%
	<ul> <li>Industry contribution</li> <li>Funded by ITC</li> <li>ASTRI owns all IP rights but industry partners can license the IP non-exclusively</li> </ul>	<ul> <li>Industry contribution</li> <li>30%: Industry partner can exclusively license the foreground IP for a period</li> <li>50%: Industry partner can own the foreground IP</li> </ul>	<ul> <li>Industry contribution</li> <li>Industry partner can own the foreground IP</li> </ul>

## **Applied technology for various market segments**

## Software & Systems - Overview

# **Smart City solutions**

## Technology

- •Embedded & mobile software •Data acquisition & sensor fusion
  - •Mobile computing System
  - •Proximity, IoT & GIS
  - •Scalable and elastic cloud
  - operational & management
- •Cloud security & analytic
- •Communication infrastructure

## Data

- •Geo & proximity
- Health
- •Transport
- •Government open data
- Environmental sensor

# **ASTRI technologies and applications**

#### ASTRI's Technologies in iHome (Elderly) 應用在房協長者資源中心的技術

Reflective pulse oximeter for measuring the pulse oximetry, pulse rate and breathing rate of elderly at home 反射式血氧儀讓老年人可在家測量血氧飽和度,脈搏和呼吸 率

Measurement results can be displayed, stored or sent automatically to authenticated care-givers/family members 測量結果可以顯示, 儲存或自動發送到照顧者/家庭成員

自動檢測

Health Hub for Medical Professionals 供護理員使用的電子健康測量系統

Elderly friendly interface design 長者友好的界面設計 Instant health condition indication 即時健康狀能指示

**ASTRI** Proprietary

#### **ASTRI's Technologies in TWGHs** 應用在東華三院的技術(1)

### 社區關懷識別系統\*

#### \*與HKRITA及LCSM共同合作開發

**ASTRI Proprietary** 

#### ASTRI's Technologies in TWGHs 應用在東華三院的技術(2)

## 社區關懷識別系統

培訓與測試安裝的系統

## **EHSP Web Portal: Statistical Analysis & Risk Level**

#### Elderly Healthcare Solution Platform

Latest Record (on 08/07/2015): SBP 156mmHg, DBP 102mmHg, Pulse 86bpm

#### Risk Level

Cardiovascular Risk is Moderate to High(3-4%).

#### Cardiovascular Risk

Calculation algorithm based on 2013 ESH/ESC Guidelines

### **EHSP Web Portal: Risk Level Calculation**

#### **Guidelines & Rules + Patient's Individual Characteristics + Patient's Vital Sign Data**

#### Risk Level Calculation Algorithm based on

 2013 ESH/ESC Guidelines for the management of arterial hypertension (European Society of Hypertension/Cardiology)
 Patient's health condition profile counting as Risk Factors
 Patient's vital sign data collected by ASTRI EHSP system

Other rick factors	Blood pressure (mmHg)			
asymptomatic organ damage or disease	High normal SBP 130–139 or DBP 85–89	Grade 1 HT SBP 140–159 or DBP 90–99	Grade 2 HT SBP 160–179 or DBP 100–109	Grade 3 HT SBP ≥180 or DBP ≥110
No other RF		Low risk	Moderate risk	High risk
1–2 RF	Low risk	Moderate risk	Moderate to high risk	High risk
≥3 RF	Low to moderate risk	Moderate to high risk	High risk	High risk
OD, CKD stage 3 or diabetes	Moderate to high risk	High risk	High risk	High to very high risk
Symptomatic CVD, CKD stage ≥ 4 or diabetes with OD/RFs	Very high risk	Very high risk	Very high risk	Very high risk

BP = blood pressure; CKD = chronic kidney disease; CV = cardiovascular; CVD = cardiovascular disease; DBP = diastolic blood pressure; HT = hypertension; OD = organ damage; RF = risk factor; SBP = systolic blood pressure.

FIGURE 1 Stratification of total CV risk in categories of low, moderate, high and very high risk according to SBP and DBP and prevalence of RFs, asymptomatic OD, diabetes, CKD stage or symptomatic CVD. Subjects with a high normal office but a raised out-of-office BP (masked hypertension) have a CV risk in the hypertension range. Subjects with a high office BP but normal out-of-office BP (white-coat hypertension), particularly if there is no diabetes, OD, CVD or CKD, have lower risk than sustained hypertension for the same office BP.

	Risk Level	Possibility of Cardiovascular Events in 10 Years
	Minimal	N/A
	Low	< 1%
	Moderate	2%
	Moderate to High	3 - 4%
	High	5 – 10%
	High to Very High	> 10%
ASTRI Prop	Very High	> 15%

Risk factors	
Male sex	
Age (men ≥55 year	s; women ≥65 years)
Smoking	
Dyslipidaemia	
Total cholestero	>4.9 mmol/L (190 mg/dL), and/or
Low-density lipo and/or	protein cholesterol >3.0 mmol/L (115 mg/dL),
High-density lips (40 mg/dL), wom	protein cholesterol: men <1.0 mmol/L en <1.2 mmol/L (46 mg/dL), and/or
Triglycerides >1.	7 mmol/L (150 mg/dL)
Fasting plasma glu	1cose 5.6–6.9 mmol/L (102–125 mg/dL)
Abnormal glucose	tolerance test
Obesity [BMI ≥30 k	g/m² (height²)]
Abdominal obesity women >88 cm) (in	y (waist circumference: men ≥102 cm; Caucasians)
Family history of p women aged ⊲65 y	remature CVD (men aged <55 years; ears)
Asymptomatic or	gan damage
Pulse pressure (in	the elderly) ≥60 mmHg
Electrocardiograph RaVL >1.1 mV; Co	hic LVH (Sokolow–Lyon index >3.5 mV; rnell voltage duration product >244 mV*ms), or
Echocardiographic women >95 g/m <sup>2</sup> (B	: LVH [LVM index: men >115 g/m <sup>2</sup> ; 3SA)]*
Carotid wall thicke	ning (IMT >0.9 mm) or plaque
Carotid-femoral P	WV >10 m/s
Ankle-brachtal Ind	ax <0.9
CKD with eGFR 30	⊢60 ml/min/1.73 m <sup>2</sup> (BSA)
Microalbuminuria (30-300 mg/g; 3.4-3 urine)	(30–300 mg/24 h), or albumin–creatinine ratio 14 mg/mmol) (preferentially on morning spot
Diabetes mellitus	
Fasting plasma glu measurements, an	icose ≥7.0 mmol/L (126 mg/dL) on two repeated d/or
HbA <sub>1c</sub> >7% (63 mm	iol/mol), and/or
Post-load plasma	glucose >11.0 mmol/L (198 mg/dL)
Established CV or	r renal disease
Cerebrovascular d transient ischaemi	isease: Ischaemic stroke; cerebral haemorrhage c attack
CHD: myocardial i with PCI or CABG	nfarction; angina; myocardial revascularization
Heart failure, inclu	ding heart failure with preserved EF
Symptomatic lowe	r extremities peripheral artery disease
CKD with eGFR <	30 mL/min/1.73m² (BSA); proteinuria
Advanced relinen	the beamarchanas or anudatos, papilloadoma

## **Healthcare and Wellness**

## **Example for service + technologies**

For special need children such as ADHD, learning and writing difficulties

From "face to face" to have more data collection at home and outside, and more analysis

## **Data analytics**

Children behavior and action data transfer to server, optional with heart beat rate sensor Trainer / psychologist for overall analysis of situation and training Tune the game and program accordingly

a reference

#### **Elderly physical rehabilitation with wearable sensors**

- More and more demand is required for elderly physical rehabilitation
- Involves professional advice and human resources.
- Long and critical physical rehabilitation program to recover her/his former strength, mobility and fitness.
- Physical therapist could make better treatment decisions if they had accurate patient home exercise data (selfreport lack standardized and objective information)
- Lack of cost effective technology for capturing and advising motion situation

### **Current capture system– Multicamera capture**

- Multi-camera motion capture solution
- Complicate installation in room and expensive
- Indoor special room
- Attach white ball to body key points

## **Current capture system – Kinect based capture**

- Use low cost motion Kinect sensor for human body gesture analysis.
- The joint positions can be obtained from the Kinect sensor and its software library in 3D space.
- larger computer and Kinect sensor on table, which is not wearable
- Distance is limited to a few meters of action range.

**Ref:** Use Kinect for physiotherapy, limited to 4 meters of walking

## New idea for motion analysis (fall prevention)

- Wearable accelerometer and gyrosensor
- First put 2 sensors on each shoe (total 4)
- 4 wearable motion sensors for human basic walking motion capture
- Wirelessly link (Bluetooth 4.0) to smartphone
- Measurement for capture:
  - Walking distance
  - Foot to floor angle
  - Angle of 2 feet
  - Rhythm of steps
  - Walking style
  - ..
- Data visualization in smartphone
- Expert advices from physical therapists
